Scenario 1: Autoptic investigation only

```

Scenario 2: Autoptic investigation + auxiliary material (e.g. a photo)

Reported case: The Antikythera Mechanism, some 700 chars identified by additional BTI.

Scenario 3: Non-optic recognition, using a digital representation only (e.g., a photo, BTI imaging, ...)

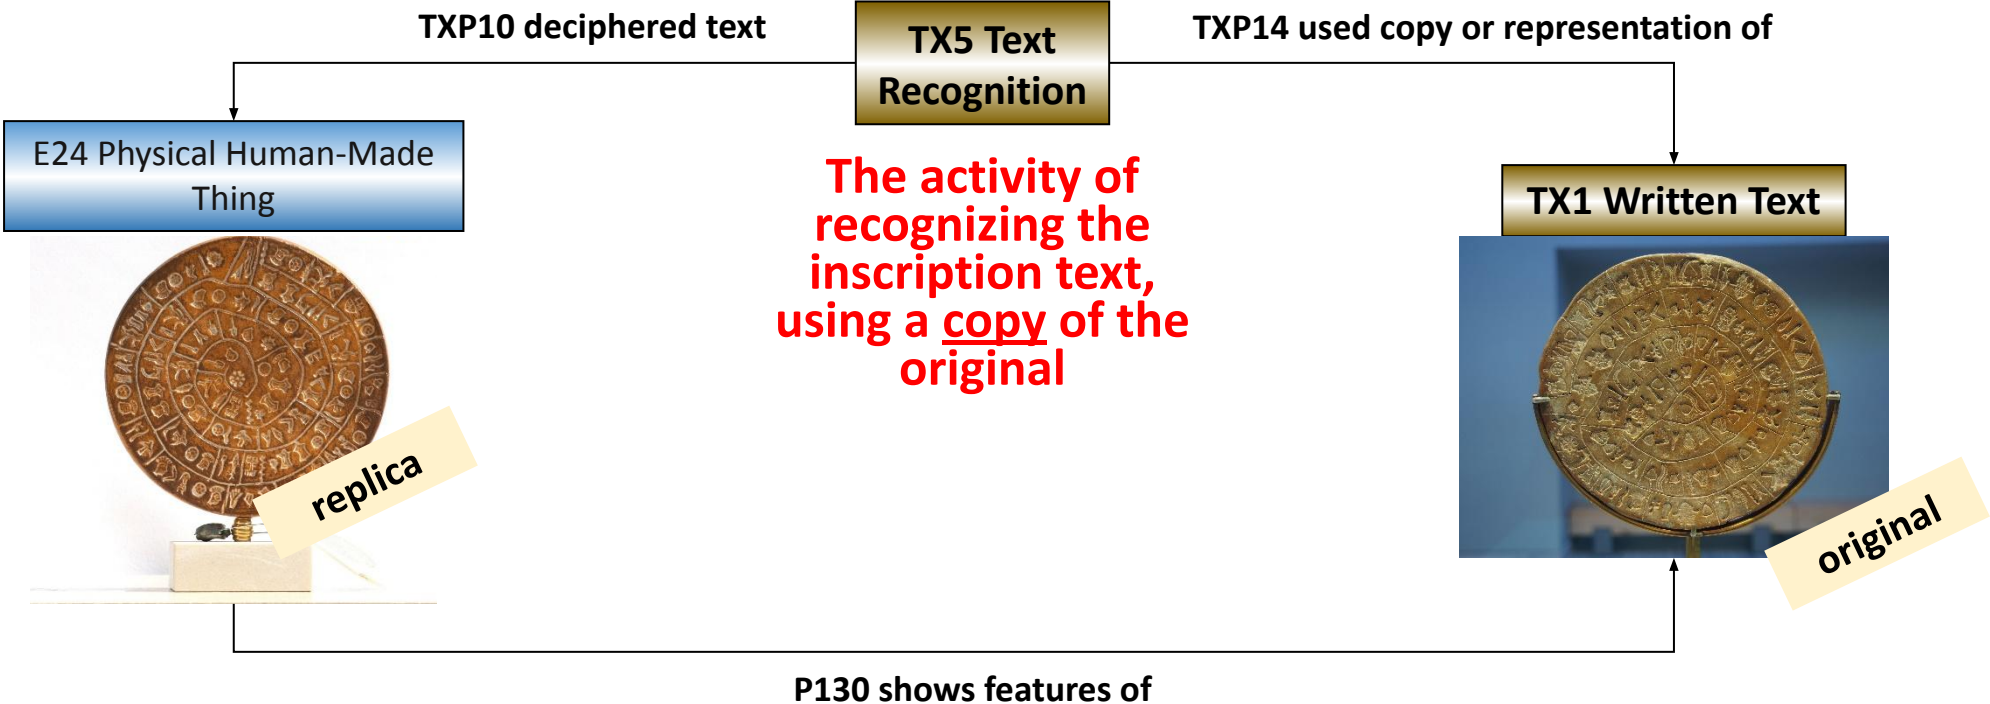

```

$$\text{TXP13}(x, y) \Rightarrow (\exists z) [\text{TXP14}(x, z) \wedge \text{P138}(y, z) \wedge \neg \text{TXP10}(x, z)]$$

Scenario 4: Recognition using a copy / replica (e.g. because the original is not available, or does not exist anymore)

```

:textRecogn_in_phaistosDisc
  rdf:type crmtex:TX5_Text_Recognition ;
  crmtex:TXP10_deciphered_text :E24_Copy_of_PhaistosDisc
